Full-Stack Engineer with 3+ years of experience designing and owning scalable React/TypeScript frontends and Java/Python backend platforms. Led development of AI-powered products, distributed Kafka/Spark systems, and multi-tenant cloud services at Cisco, serving 80K+ tenants and 6K+ daily users. Strong background in frontend, event-driven systems, observability, performance optimization, with a track record of delivering measurable improvements in latency, reliability, and developer productivity.

SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, SQL, Shell
- **Frontend:** React, TypeScript, Redux, HTML, CSS, Responsive UI, REST APIs, SSE
- **Backend:** Node.js, Express, FastAPI, Spring Boot
- **Data & Storage:** PostgreSQL, Oracle, Snowflake, Amazon S3, MongoDB, Redis
- **Distributed Systems:** Kafka, Elasticsearch, Apache Spark
- **Cloud & DevOps:** AWS (S3, Lambda), Docker, Kubernetes, Jenkins, Spinnaker
- **Observability:** OpenTelemetry, Jaeger, Langfuse, Splunk, Prometheus, Grafana
- **AI / GenAI:** RAG & NL2SQL, LangChain, ChromaDB, MCP & Google A2A, Tool/Function Calling
- **Tools:** Git, Jira, Postman, DBeaver, pgAdmin

EXPERIENCE

Cisco Software Engineer II

Aug 2025 — Present

- Built Kafka and Spark report platform on Kubernetes, serving 80K+ tenants and 10K reports/day while cutting p95 latency 96%.
- Optimized Spark partitioning and Parquet storage, reducing pipeline runtime and compute cost 25% while eliminating duplicate retry executions.
- Owned React and TypeScript AI assistant UI with SSE streaming and Express BFF, cutting perceived latency 6s for 6,000 DAU.
- Managed client-side state with Redux for streaming message state, request cancellation, and optimistic UI updates, keeping the interface responsive under high-concurrency load.
- Instrumented the assistant with OpenTelemetry traces exported to Jaeger, layered with Langfuse LLM-specific tracing, shortening time-to-diagnose for latency regressions.
- Enforced tenant RBAC for Postgres-backed retrieval, isolating documents and PII metrics across 80k tenants.
- Rolled out autonomous SDLC AI agent to 180+ developers across 3 teams, increasing sprint throughput roughly 40%.

Cisco Software Engineer

Aug 2023 — May 2025

- Replaced server-rendered Partner Locator search with React SPA, adding type-ahead and reducing partner discovery time by 45%.
- Added Elasticsearch autocomplete and Redis profile caching, reducing search load 40% and improving Partner Locator responsiveness 65%.
- Built resilient Oracle to Elasticsearch indexing with incremental updates, reducing data freshness lag from 24 hours to 5 minutes.
- Prototyped AI-driven partner recommendations (FastAPI, LangChain, ChromaDB, self-hosted LLM) generating 5–6s summaries.

- Developed 20+ Java REST APIs for partner registration, handling 20K daily submissions with Oracle persistence and Kafka async sync.
- Built event-driven Salesforce, Oracle, and Kafka pipeline with retries and DLQs, raising downstream sync reliability to 99.9% SLA.

PROJECTS

Knowledge Vault React + TypeScript flashcard app with a daily 10-min review flow Mar 2025 – Jul 2025

Stack: React, TypeScript, Redux, Node.js/Express, SQLite, PostgreSQL, Redis, AWS S3

- Built React and TypeScript flashcard UI with Redux session state and SQLite local search, improving review completion time by 35%.
- Designed end-to-end encrypted sync with S3 backups, Postgres metadata, and Redis rate limits, keeping daily reviews under 10 minutes.
- Added optional AI flashcard generation with Ollama or BYO API keys, preserving offline core workflows.

EDUCATION

Amrita School of Engineering (ASE) Bachelor of Technology — Computer Science · Jun 2019 — May 2023
Amritapuri

- CGPA: 9.5/10
